Independent Statistics and Analysis

**Domestic Distribution of U. S. Coal by Origin State,  
Consumer, Destination and Method of Transportation  
3Q 2010**

March 2011

## **Quarterly Coal Distribution Table Format and Data Sources 3Q 2010**

In keeping with EIA's efforts to increase the timeliness of its reports, this Quarterly Coal Distribution Report is a preliminary report, based on the most current data available from EIA's various monthly, quarterly and annual surveys of the coal industry and electric power generation industry. The final report will rely on the receipt of annual data to replace the imputed monthly data for smaller electric generation plants that are excluded from the monthly filing requirement, and final data for all other respondents.

The Coal Distribution Report traces coal from the origin State to the destination State by transportation mode. The data sources beginning with the 2008 Coal Distribution Report reflect a major revision to EIA data collection surveys. The EIA-6A, "Coal Distribution Report – Annual," was discontinued at the end of 2007 and the new EIA-923, "Power Plant Operations Report" became the source of data for the electric generation sector. In 2008, almost 93 percent of the coal distributed was received by electric generation plants.

The Electricity Generation sector in this report includes Electric Utilities, Independent Power Producers and Electric Utility Combined Heat & Power plants. Commercial Combined Heat & Power and Industrial Combined Heat & Power plants, which also submit data on the EIA-923, are included in the Industrial Plants (excluding Coke) and Commercial & Institutional sectors.

Coal receipts as provided in the Coal Distribution Report for the Electricity Generation sector are less than the total quantities reported on the EIA-923. The Coal Distribution Report reflects domestic distribution of coal. Therefore, coal imports from the EIA-923 survey are excluded. Other excluded categories are waste coal for the Electricity Generation sector, plus all receipts for the Commercial Combined Heat & Power and Industrial Combined Heat & Power plants.

Coal distribution to Coke Plants is obtained from the Form EIA-5, "Quarterly Coal Consumption and Quality Report – Coke Plants." The volume of coal distributed to coke plants excludes coal imports and is thus smaller than the volume of receipts at Coke Plants reported in the Quarterly Coal Report (QCR), which includes imports.

Coal distribution to Industrial Plants (excluding Coke) is obtained from the Form EIA-3, "Quarterly Coal Consumption and Quality Report, Manufacturing and Transformation /Processing Coal Plants and Commercial and Institutional Coal Users" and Form EIA-7A, "Coal Production and Preparation Report." The Coal Distribution Report volume reported for Industrial Plants (excluding Coke) is smaller than the volume of receipts at Industrial Plants in the QCR to the extent that the Coal Distribution Report excludes waste coal and imports.

Since 2008, the Residential & Commercial consuming sector has been replaced by the Commercial & Institutional sector, which excludes the residential sector and small amounts of coal used in the transportation fuel sector (primarily tourist steam railroads).

Commercial & Institutional coal distribution is obtained from the Form EIA-3, “Quarterly Coal Consumption and Quality Report, Manufacturing and Transformation /Processing Coal Plants and Commercial and Institutional Coal Users” and Form EIA-7A, “Coal Production and Preparation Report.”

Previously, on the EIA-6A survey form, it was not possible to identify refuse or waste coal<sup>1</sup>, which was included in anthracite and bituminous distributions. Waste coal receipts are collected and separately identified on the EIA-923 and are especially significant in Pennsylvania and West Virginia. The Coal Distribution Report excludes waste coal and small volumes of Synthetic Coal that may have been distributed after all Synthetic Coal plants were closed.

---

<sup>1</sup> **Waste coal:** Usable material that is a byproduct of previous coal processing operations. Waste coal is usually composed of mixed coal, soil, and rock (mine waste). Most waste coal is burned as-is in unconventional fluidized-bed combustors. For some uses, waste coal may be partially cleaned by removing some extraneous noncombustible constituents. Examples of waste coal include fine coal, coal obtained from a refuse bank or slurry dam, anthracite culm, bituminous gob, and lignite waste.

Destination State	Transportation Mode	Electricity Generation	Coke Plants	Industrial Plants (Excluding Coke)	Commercial & Institutional	Total
	River	25,810	1,844	w	w	28,542
	Tidewater Piers	163	-	-	-	163
	Tramway, Conveyor, and Slurry Pipeline	15,843	-	-	-	15,843
	Truck	24,119	484	4,965	280	29,848

s Quantity is less than 500 short tons, but value is included in any associated total.

w Data withheld to avoid disclosure.

- = No data are reported.

**Note:** Total may not equal sum of components because of independent rounding. Data for all consumer categories are for coal receipts at those plants, with one exception. Coal distributed to industrial plants includes a small amount of coal consumed by coal preparation plants.

**Sources:** Electricity Generation: Form EIA-923, "Power Plant Operations Report;" Coke Plants: Form EIA-5, "Quarterly Coal Consumption and Quality Report - Coke Plants;" Industrial Plants (excluding Coke) and Commercial and Institutional: Form EIA-3, "Quarterly Coal Consumption and Quality Report, Manufacturing and Transformation/Processing Coal Plants and Commercial and Institutional Coal Users" and Form EIA-7A, "Coal Production and Preparation Report."
